Now, planners can make better decisions about mobility.

Sidewalks are an important part of a city's mobility infrastructure.

CurbPHX is a tool to build a sidewalk data layer.

All the data is turned into a GIS layer.

CurbPHX uses aerial imagery...

...then uses machine learning to find sidewalks.

Look! We need to build a sidewalk here.

With CurbPHX, the city sidewalks will be better, and make it easier for people to get around.
