Users can see whole inventoried data sets with meta data. I used it to spend days calling to find out what I needed. Now it's all here.

We know data has the answers to our water challenges, but our data is everywhere.

Durban eThekwini has grown so much that water resilience is a constant challenge.

Data Lake

Data Lake

Now we are all on the same page and have the right info to make smart decisions about Durban's future.

We need better access to data for modeling, benchmarking, and alerts on our water system...

Shana does all that! It starts with a Data Lake for all our files and a dashboard with key analytics.

And we can customize our dashboard so we all get the info we need.

... so we know how much we use, and where to invest.
